#### Proposed Solution Template:

S.No.	Parameter	Description
1.	<b>Problem Statement (Problem to be solved)</b>	The increasing impact of climate change, pollution, and habitat destruction necessitates a comprehensive and efficient environmental monitoring system. This system should enable real-time data collection, analysis, and reporting to address critical environmental challenges, such as air and water quality, biodiversity loss, and the sustainability of natural resources."
2.	<b>Idea / Solution description</b>	One idea for environmental monitoring is to develop a network of low-cost, solar-powered sensor nodes placed in urban areas and natural ecosystems.
3.	<b>Novelty / Uniqueness</b>	A novel approach to environmental monitoring could involve the use of autonomous drones equipped with advanced sensors and artificial intelligence algorithms.
4.	<b>Social Impact / Customer Satisfaction</b>	Environmental monitoring can engage communities in citizen science projects, fostering a sense of responsibility and ownership for their local environment.
5.	<b>Business Model (Revenue Model)</b>	Create user-friendly dashboards and reports to present the data in an understandable format.
6.	<b>Scalability of the Solution</b>	Build the solution with a modular architecture, allowing for easy expansion and integration of new sensors, data sources, and technologies. This makes it adaptable to changing monitoring needs.
